

WeatherBug Driver Plug-in for KEPServerEX

Can you use live, accurate, reliable weather data in your automation & control applications?

Employing the universally accepted OPC standard, KEPServerEX maximizes the promise of OPC and expedites project development through the use of a single server interface, regardless of the control system in use. Multiple device drivers can be "plugged in" to one application which centralizes communications and greatly reduces user learning curves.

Kepware's OPC server and WeatherBug driver plug-in allow you to get crucial weather data into your control system.

WeatherBug

WeatherBug is the leading provider of weather information services; they manage and operate a proprietary network of 8,000+ weather tracking stations. These professional-grade weather stations generate live neighborhood level reports every second; data from other providers is typically 60+ minutes old.

Kepware Technologies

Kepware specializes in OPC and device-communication technologies for the industrial automation market. With over 10 years of steady progress, Kepware Technologies has become a trusted source of genuine connectivity products based on open standards.

Get access to live, accurate, reliable nationwide weather station data for your industrial applications; login to the "My Kepware" product portal of our website and download the KEPServerEX product suite today!
